README

文件列表

```
args.py
ddpg_v2.py
main.py
rainbow_cv_v1.py
rainbow_v5.py
```

依赖

以下为部分关键依赖,其中 mujoco 必须为 2.3.* 版本,否则会出现与 gymnasium 不匹配的问题,为解决该问题需要先安装 gymnasium [mujoco],再安装 mujoco==2.3.0。

```
pytorch
gymnasium==0.29.1
gymnasium[atari]
gymnasium[accept-rom-license]
gymnasium[mujoco]
mujoco==2.3.0
```

运行

程序主入口为 main.py, 运行时需要指定 --env_name 参数。

例如:

```
python .\main.py --env_name VideoPinball-ramNoFrameskip-v4
python .\main.py --env_name Pong-ramNoFrameskip-v4
python .\main.py --env_name Breakout-ramNoFrameskip-v4
python .\main.py --env_name HalfCheetah-v4
python .\main.py --env_name Ant-v4
python .\main.py --env_name Hopper-v4
python .\main.py --env_name Humanoid-v4
```

默认情况下不会进行渲染,如果需要渲染,需要指定--render参数,如:

```
python .\main.py --env_name VideoPinball-ramNoFrameskip-v4 --render
python .\main.py --env_name Humanoid-v4 --render
```

通过 --episode_limit 参数可以指定最大训练轮数, 如:

```
python .\main.py --env_name VideoPinball-ramNoFrameskip-v4 --episode_limit 100
```

仅在以下环境进行过测试:

- VideoPinball-ramNoFrameskip-v4
- Pong-ramNoFrameskip-v4
- Breakout-ramNoFrameskip-v4

- BreakoutNoFrameskip-v4
- HalfCheetah-v4
- Ant-v4
- Hopper-v4
- Humanoid-v4

但是,理论上也支持其他环境,如果想运行其他环境,可以通过 --force_run 参数指定运行方法,方法包括:

- value-base: value-based方法,环境state需要为一维向量
- value-base-cv: value-based方法,使用CNN进行图像处理,环境state为图像
- policy-base: policy-based方法,环境state需要为一维向量

以下为运行示例:

```
python .\main.py --env_name VideoPinball-v4 --render --force_run value-base-cv
```

通过禁用改进方法,可以运行原始DQN,如:

```
python .\main.py --env_name VideoPinball-ramNoFrameskip-v4 --disable_dueling --disable_noisy --disable_double_dqn --disable_priority --multi_step 1
```

还可以通过命令行控制其他参数,部分参数仅对Value-based或Policy-based其中一种生效,完整参数如下:

```
python .\main.py -h
usage: main.py [-h] --env_name ENV_NAME [--replay_buffer_capacity
REPLAY_BUFFER_CAPACITY]
               [--train_batch_size TRAIN_BATCH_SIZE] [--episode_limit
EPISODE_LIMIT] [--render]
               [--gamma GAMMA] [--force_run {value-base,value-base-cv,policy-
base}] [--target_dqn]
               [--disable_noisy] [--disable_dqn] [--disable_priority] [--
disable_dueling]
               [--multi_step MULTI_STEP] [--target_update_delay
TARGET_UPDATE_DELAY]
               [--learning_rate LEARNING_RATE] [--test_delay TEST_DELAY]
               [--init_epsilon INIT_EPSILON] [--min_epsilon MIN_EPSILON]
               [--epsilon_decay EPSILON_DECAY] [--tau TAU] [--sigma SIGMA] [--
actor_lr ACTOR_LR]
               [--critic_lr CRITIC_LR]
optional arguments:
  -h, --help
                        show this help message and exit
  --env_name ENV_NAME
  --replay_buffer_capacity REPLAY_BUFFER_CAPACITY
  --train_batch_size TRAIN_BATCH_SIZE
  --episode_limit EPISODE_LIMIT
                        maximum episode for training
  --render
                        render environment
  --gamma GAMMA
                        discount factor
  --force_run {value-base, value-base-cv, policy-base}
```

```
force run method, ignore check of environment, choose
from value-base,
                       value-base-cv, policy-base
value-base:
  For value-based method (Rainbow)
  --target_dqn
                      use target DQN
  --disable_noisy disable noisy net
  --disable_double_dqn disable double DQN
  --disable_priority disable priority replay buffer
  --disable_dueling
                      disable dueling DQN
  --multi_step MULTI_STEP
                       multi-step for n-step DQN, set to 1 for vanilla DQN
  --target_update_delay TARGET_UPDATE_DELAY
                       delay for updating target network or exchanging double
network
  --learning_rate LEARNING_RATE
                       learning rate
  --test_delay TEST_DELAY
                       delay for testing
  --init_epsilon INIT_EPSILON
                       initial epsilon value for epsilon-greedy exploration
  --min_epsilon MIN_EPSILON
                       minimum epsilon value for epsilon-greedy exploration
  --epsilon_decay EPSILON_DECAY
                       epsilon decay rate for epsilon-greedy exploration
Policy-base:
  For policy-based method (DDPG)
                       soft update parameter
  --tau TAU
  --sigma SIGMA
                       noise parameter
  --actor_lr ACTOR_LR actor learning rate
  --critic_lr CRITIC_LR
                       critic learning rate
```
